

online course

BEZPIECZNY PROGRAMISTA

BASIC INFO

The "Bezpieczny Programista" (Secure Programmer) is a comprehensive web application security course. It is aimed primarily at programmers, software engineers and testers, but also at anyone who wants to gain practical, up-to-date knowledge that will enable them to effectively identify vulnerabilities and build secure web applications.

COURSE ANATOMY

The course consists mainly of videos and practical exercises. The video explains the theory needed to complete the exercises, as well as the solutions. There are also extra tasks (where no solutions are given) where the student can try out new skills in practice.

SPECIAL OFFER

Are you planning to purchase the course for a larger number of employees? Contact me and I will prepare a special offer for you.

999 PLN

(gross per 1 person)

BENEFITS

These days, every company faces the risk of falling victim to cyber attacks and data breaches. As a result, investing in security through a course like this one is a wise choice. Such attacks can lead to financial losses, legal penalties, and damage to the company's reputation and the trust of its customers. This makes the course a valuable investment not only in security, but also in:

- customer satisfaction and safety,
- employee growth,
- company's reputation and progress,
- reduction of expenses linked to security issues.

INSTRUCTOR

My name is Kacper Szurek. For more than a decade, I've been analyzing malicious software at ESET. I started sharing my expertise on cybersecurity through [my YouTube channel](#) in 2018, where I now have over 63k subscribers.

I've developed my own e-learning platform, vod.szurek.tv, where I offer paid educational content on cybersecurity. My initial security awareness course, "Cyfrowe zagrożenia" (Digital Threats), has already had more than 5,000 registrants.

I also offer security training for businesses.

I'm aiming to provide reliable knowledge and top-notch education. I believe that education is superior to instilling fear. I'm against false assurances and marketing VPNs as the solution for everything.
